Data Flow Diagram

The Data Flow Diagram for CRICKSTATS illustrates how information moves seamlessly between users, processes, and data stores. It shows how a cricket fan or analyst interacts with the application, how the system retrieves player and match performance data, and how this data is aggregated into dashboards. By mapping external entities, processes, and data stores, the diagram highlights the flow of requests, responses, and analytics, ensuring transparency in how CRICKSTATS manages and delivers insights' Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Represents a cricket fan, analyst, or coach interacting with CRICKSTATS. They send requests (e.g., selecting a team) and receive outputs (e.g., dashboards).
Rectangle with numbered header	Process	Defines system activities such as retrieving player records, calculating roll-up summaries, or generating dashboards. Each process transforms input data into meaningful insights.
Rectangle (solid fill, no number)	Data Store	Stores information within Salesforce Objects — e.g., Player Object and Match Performance Object — for later retrieval and reporting.
Labelled arrow	Data Flow	Shows how data moves between entities, processes, and data stores. For example, team selection flows into the system, player stats flow

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
