

Solution Requirements

Date	29 September 2026
Team ID	SWTID-2026-8821
Project Name	CRICKSTATS
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

The CRICKSTATS application defines its functional and non-functional requirements to ensure smooth operation, accurate data handling, and an engaging user experience. Functional requirements describe what the system will do, while non-functional requirements specify how well it will perform.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Secure login for system administrators and authorized users through Salesforce authentication.	High
2	Authorization levels	Role-based access control for Admin, Analyst, and Viewer profiles to manage permissions and visibility.	Medium
3	External interfaces	Integration with Salesforce Objects and Lightning Flow for dynamic data retrieval and visualization.	High

4	Transactions processing	Automated roll-up summaries to calculate player statistics and match performance metrics.	High
5	Reporting	Interactive dashboards and reports displaying player and match analytics with filtering options.	High
6	Business rules, etc.	Flow logic to filter players by team, calculate averages, and update dashboards automatically.	High
7	Compliance to laws or regulations	Adherence to Salesforce data privacy and security standards ensuring safe data handling.	High
8	<i>Other</i>	Custom tabs, navigation setup, and app personalization for CRICKSTATS users.	Medium

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Flow and dashboard response time should be optimized for quick data retrieval.	< 2 seconds
2	Scalability	System should handle large datasets of player and match records efficiently.	10,000+ concurrent records
3	Security & Data Privacy	All player and match data must be encrypted and securely stored within Salesforce.	AES-256 encryption
4	Reliability & Availability	Dashboards and flows must maintain consistent uptime and data accuracy.	99.9% uptime
5	Usability & Accessibility	User interface should be intuitive, responsive, and accessible across devices.	WCAG 2.1 AA compliance
6	Maintainability	Modular design allowing easy updates to flows, dashboards, and data objects.	High maintainability
