

Technology Stack

Date	15 March 2026
Team ID	SWTID-2026-8821
Project Name	CRICKSTATS
Maximum Marks	2 Marks

Define Your Technology Stack:

The CRICKSTATS application uses a robust technology stack built on Salesforce to ensure scalability, maintainability, and efficient data handling. The chosen tools and frameworks enable seamless integration between custom objects, flows, and dashboards, providing a smooth user experience for cricket fans and analysts. Architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side (e.g., React, Angular, HTML/CSS)	Salesforce Lightning App Builder	Provides a responsive interface with reusable components and easy customization for navigation and dashboards.

2	Backend / Server-Side (e.g., Node Backend / Server-Side (e.g., Node.js, Python/Django, Java)js, Python/Django, Java)	Apex (Salesforce)	Enables fast processing, automation of roll-up summaries, and integration with Salesforce objects using native logic.
3	Database / Data Storage (e.g., MySQL, MongoDB, PostgreSQL)	Salesforce Objects (Player, Match Performance)	Offers strong relational mapping, secure data storage, and built-in support for roll-up summaries and lookups.
4	Cloud / Hosting / Deployment (e.g., AWS, Azure, Heroku, Docker)	Salesforce Cloud Platform	Ensures scalability, reliability, and cost-effective hosting with built-in deployment and maintenance tools.
5	Version Control & CI/CD (e.g., GitHub, GitLab, Jenkins)	GitHub	Facilitates seamless collaboration, version tracking, and code management among team members.
6	Third-Party APIs / Other Tools (e.g., Stripe, Twilio, Google Maps)	Salesforce Reports & Dashboards	Enables advanced analytics, visual insights, and real-time data visualization for player and match performance.
